Fu Li

Email: fuli2@illinois.edu **Mobile**: +1 314-224-0690 **Homepage**: https://fuli2bb.github.io/

Education

University of Illinois Urbana-Champaign **06/2019 - Present**
Ph.D. in Bioengineering Urbana, IL
Washington University in St. Louis **08/2018 - 06/2019**
Ph.D. in Imaging Science (Transferred) St. Louis, MO
Sun Yat-sen University **09/2012 - 07/2016**
B. S. in Applied Mathematics Guangzhou, China

Technical Skills

Core skills: Image processing, medical image reconstruction, computational imaging, wave simulation, inverse problems, signal processing, deep learning, high performance computing.
Programming languages: C/C++, Python, MATLAB
Frameworks/Tools: CUDA, MPI, TensorFlow, PyTorch, OpenCV, Pyblind, CMake, Docker, Git, Slurm, k-wave

Work Experience

Perception Vision Medical Technologies **07/2016 - 06/2018**
Imaging Algorithm Engineer Guangzhou, China
- Worked on medical image processing including tumor segmentation, cell counting, image denoising, lung nodule detection and tumor growth prediction.
- Worked on PACS system development based on MITK and QT.

Research Experience

Advanced High-resolution Reconstruction for 3-D Quantitative Ultrasound Computed Tomography
Computational Imaging Science Lab at UIUC (Dr. Mark A. Anastasio)
Collaborative project with Delphinus Medical Technology, Inc
- Developed time-of-fight and bent-ray tomography methods based on Eikonal equation to estimate initial speed-of-sound maps.
- Developed full wave equation-based reconstruction methods (FWI) to estimate high-resolution speed-of-sound and acoustic attenuation distribution in biological tissues.
- Developed a GPU-accelerated pseudo-spectral time-domain wave simulation solver (based on cuFFT).
- Developed calibration algorithms to estimate effective system parameters (transducer, source pulse) to compensate model mismatches for experimental data.
- Developed a distributed GPU framework of multi-ring 3D FWI that significantly reduces the reconstruction times.
- Developed a speed-of-sound corrected sum-and-delay reflectivity tomography method, which reveals improved image quality of tissue impedance, comparing to the model assuming a constant speed-of-sound.

Computationally Efficient Algorithms for Ultrasound Tomography Using Deep Learning
Computational Imaging Science Lab at UIUC
- Developed a deep learning-based method for 2D/3D data mismatch compensation on spatial-temporal data using CNN-LSTM network to allow for an accurate and fast 2D image reconstruction.
- Developed high-resolution speed-of-sound imaging approach by use of multi-modal inputs and image-to-image neural networks (U-net with attention).
- Developed learning based-data redatuming approaches for wavefield data using physical-informed neural networks.

Open-source Project: Anatomically Realistic 3-D Breast Phantom Modeling **2020 - 2021**
Computational Imaging Science Lab at UIUC
- The goal is to build a realistic virtual imaging tool to enable meaningful data generation for deep learning purposes in ultrasound/photoacoustic tomography.
- Developed 3D realistic digital breast phantoms, including four types of anatomically phantoms (dense, hetero, scattered, and fatty breasts) with stochastic shape and acoustic properties.
- Released open-source datasets along with the simulation code for ultrasound/photoacoustic community.

Automated Clinical Target Volume Delineation Model for Nasopharyngeal Carcinoma **2016 - 2017**
Perception Vision Medical Technologies
Collaborative project with Dept. of Radiation Oncology, SYSU Cancer Center and Philips Healthcare, Suzhou.

- Adopted the association rules learning method to capture region relations from clinical data. Designed a novel Markov graph model to simulate the tumor growth process.
- Validated our approach with an average dice score of 90% compared to radiotherapists' ground truth segmentation.
- Participated in PACS system development and developed user interfaces for clinical radiotherapy treatment planning using QT and VTK with Client-Server architecture.

Patents

Yao Lu, Ying Sun, Sha Yu, Jiao Tian, Li Lin, **Fu Li**. "*An association rule based Clinical Target Volume automatically delineation algorithm for Nasopharyngeal Carcinoma*. " Chinese Patent, Disclosure, 2017. (CN106875367A)

Awards

Honors:

- Scholarship for Outstanding Students in Sun Yat-sen University **2013, 2014, 2015**
- Conference Presentation Award for Graduate Students, UIUC **2021, 2022, 2023**
- Cum Laude poster award at SPIE Medical Imaging **2024**

Computational Resources Awards:

- Distributed GPU-accelerated image reconstruction methods for breast ultrasound computed tomography, Illinois Delta research allocation, 25,000 GPU-hours **2022**
- A computational framework integrating wave physics simulation and machine learning for fast and accurate transcranial photoacoustic tomography reconstruction, Illinois Blue Waters research allocation, 210,000 node-hours **2021**
